<p>SIA Inpass</p>	<p>Advanced manufacturing</p>	<p>Target market - Manufacturing and construction. Main products-services - Equipment efficiency measurement, online time scheduling system, room climate monitoring, print monitoring solutions, grain silo climate monitoring.</p> <p>Product or service differentiation - To find and perfect the best solution for the needs of each client</p> <p>Competitive advantages - Help business improve productivity and make calculated, instant decisions at any time of the day from anywhere in the world. Give a company to monitor real-time production in facilities, indoor climate parameters, or perform remote analysis of the company's employees. All the obtained data can be viewed on the client's portal page, from which it can be easily exported to other platforms and management systems. Installation of InPass sensors is simple and fast, no extra wire setup is required. The technological solution is designed in order not to affect the equipment electronics or warranty.</p>
<p>LG Holz</p>	<p>Bioeconomy</p>	<p>Our small family company was founded in the year 2011. Since the beginning of our activity, we started to produce timber products from the local wood. We work both with the coniferous and deciduous tree species, producing the goods with additional value such as building lumber, packaging materials, wooden constructions, garden houses, and furniture. Our products could be created for an individual order, realising the wishes of clients. That is why our company is flexible. We promise you good quality, realizing your wishes for a reasonable cost. The employees have enough experience to prepare your order fast and qualitatively. Until nowadays we worked with the EU countries (Germany, the Netherlands, Hungary) also with the UK and Switzerland. In the future, we would like to expand up to France, Austria, Italy, Spain, Ireland, and Northern Africa as well as getting new clients in Germany, the Netherlands, and Switzerland.</p>

<p>MALTESE</p>	<p>Food products</p>	<p>Located in that part of western Sicily where there are rolling hills and expanses of plains that arrive in a warm sea, Maltese is a family-run agricultural reality that founded its origins as far back as 1800, when the love for a small plot of land run by her grandmother "Cardeddra" (nickname given to the Maltese family meaning "spontaneous grass" that the lady loved to clean up in the rows of vines) gave her the strength to overcome prejudices and difficulties of society of the time strongly masculine, making the cultivation of vine a real profession. The company has a production about 15 hectares (Ha), fragmented into about 30 particles, with an annual production of 1,200 Ql. of table grapes, both white and red. Today Gianfranco, winemaker strongly linked to his Land, continues the activity in respect of the Sicilian peasant tradition and the 7 generations that preceded him, choosing to use culture techniques that aim at the environmental protection, thus starting a path that leads him today to be able to put to his production the brand of Biological Agriculture (Identification Code Bioagricert IT BIO 007 199165). This commitment to organic farming led him to pursue natural techniques for the production of grapes, which first of all were able to express "food values" (healthy, good, nutritious) and at the same time express "territory". In accordance with a new production mentality aimed at achieving a higher quality, since 2004 the Maltese company has been cultivating "autochthon vineyards", allocating about 10% of annual production to experimental research, focused on producing ever better grapes to make niche products, with a limited print run of bottles. Thanks to the climatic differences offered by our plots in the heart of the most renovated Sicilian wine area, Marsala, we can offer a wide variety of wines of both white varieties (Grillo; Greek; Trebbiano; Inzolia; White Catarratto & Glossy White Catarratto; White Moscato; Zibibbo; Damaschino) and the red ones (Black d'Avola; Nerello Mascalese; Frappato; Perricone). Thanks to this new vision, the company won in 2013 "New Factors of Success", a competition aimed at the enhancement and dissemination of good practices in Rural Development created by young farmers under the EEASR, and in 2014 the bronze medal for the first family Perricone wine, awarded at the Botanical Research Institute of Texas by the International award of excellence in sustainable wine growing. Alongside the production of bottled wine, the Maltese Company has also promoted several cultural initiatives for its territory with the aim of not letting the local agricultural sector die and promoting the low "environmental impact" organic farming.</p>

<p>LO PICCOLO - BIO GOLD</p>	<p>Food products</p>	<p>Bio Gold was founded in 2006 at the behest of Nicolò Lo Piccolo, a young engineer with a passion for nature and bees, a passion that has become a profession and that today represents the value of a reality in strong Scythian. The company Bio Gold is located in Caltagirone, in the province of Catania, within one of the most beautiful places in Sicily: the Forest oriented nature reserve of St. Peter'. Bio Gold aims to convey the values of environmental sustainability and respect for nature, creating products that combine excellence in product quality with the ability to exploit modern technologies without altering environmental balances. Bio Gold respects the life cycle of nature and offers customers only what the land gives, season after season. As a real family, we collect the best products for you and add a touch of innovation to everything we do. Our company has received numerous awards and quality claims, including organic certification from Ecogroup Italia. It has also been awarded for the technological invention of a machine that isolates the venom of bees, whose beneficial properties are reusable in both the cosmetics and pharmaceutical sectors. People are Bio Gold's most important assets. They never stop studying, finding solutions with low environmental impact and adopting production methods consistent with recycling logic and sustainable development. We offer a wide range of high-quality organic products. Honey Bio Gold is organic, of controlled and protected origin. The bees that produce this honey take nectar in uncontaminated areas, away from sources of pollution and have their base in the nature reserve of the Forest of St. Peter in Caltagirone (Sicilia). We also create organic honey-based products, including beeswax and candies of various tastes (honey, alpine herbs, eucalyptus, blueberry, bergamot and vanilla, violet, rose, ginger and lemon, citrus with propolis and vitamin C, pine with propolis, minds, propolis). We also produce preserves made from cherry tomatoes, eggplants, artichokes and onions, tomato pastes, jams and marmalades of oranges, lemons and strawberries that preserve all the flavours of the nature of our Sicilian land, according to traditional recipes. We select and treat of course the best organic aromas (oregano, rosemary, bay leaf and capers) in order to maintain the sensory priorities of the product. Bio Gold works without supply chain brokerage and with a logistics standard we created to have the best of our production at the lowest cost satisfying a demanding niche of customers, national and international.</p> <p>Summing up our values and strengths:</p> <ul style="list-style-type: none"> - Concentration of tradition and innovation - Special location in a nature reserve - Only beekeeping and organic farming products - We believe in Km 0 and sustainable growth - We respect the value of the natural cycle and the priceless contribution of bees in the life cycle - Optimise product delivery without supply chain brokerage steps - High-quality warranty at competitive prices.
